

Bird Phazer 200

The **Bird Phazer 200** is powerful enough to repel Canada geese, wild turkeys and other birds not just at dawn, dusk, night, and overcast days but also on cloudy days. But not in full sun, cloudless days.

At dawn, dusk or night you can see the powerful beam as it leaves the laser...making it easy to aim no matter how far away the birds are

6 1/4" X 1 1/8" dia

Applications:
Roosts in trees
Geese in ponds
Barns
Marinas
Fish ponds

Effective on:
(Large & Small birds)

Canada geese
Cormorants
Egrets
Heron, Gulls,
Ducks
Pigeons
Starlings

Crows
Wild turkeys
Vultures

The Bird Phazer 200 not only disperses Canada geese at dawn, dusk, and overcast days; but also on cloudy days. But not in full sun, cloudless days.

Geese control WITHOUT the disturbance of shotguns or pyrotechnics to neighbors or other wildlife. And without harming them.

Lasers for bird control were tested & recommended by the USDA Wildlife Services.

The Bird Phazer 200 drives geese and flocks of birds away by traumatizing them. Half their vision is in the uv light range. Consequently, their eyes are very sensitive to the powerful green laser beam when it is reflected off their feathers.

Another tactic is to aim the laser beam at their feet so they see it reflected on the grass or hard surface.

INSTRUCTIONS

Load the rechargeable battery with the negative end first into the laser. Follow instructions on the included sheets and keep info with the laser. To avoid overheating the diode, turn on the laser for 20 second bursts maximum and then 10 seconds off.

Birds are very vulnerable to harassment as they approach their roosts (whether in trees or buildings) at dusk. Use the Bird Phazer 200 as the birds start returning. Harass them, preventing them from landing in the roosting areas. There should be an immediate effect. Continue for as long as the birds attempt to approach. The birds already in the roost will rise also.

On the first night the birds may go to another near-by location. Wait for a half hour or so, then try to re-enter the roost. For that reason, you should stay at the roost for at least an hour after sunset on the first night.

By the second or third night, most of the birds will have gotten the message. Some birds may fly over the roost to check it out. Continued harassment with the Bird Phazer 200 will force them to relocate their roosting site. It usually takes from 3-5 nights to effectively keep the birds (& geese) from the roost. **Do not point the laser at people or moving vehicles.**

TECHNICAL DATA	PHAZER
Optical power [cw]	<200mW
Divergence (full angle)	120°
Peak wavelength	532 nm
Spectrum half width Δλ	12 nm
Drive current (typ.)	450 mA

Bird Phazer 200

Disperses night roosts **WITHOUT** the disturbance of shotguns or pyrotechnics.

Nonlethal, non-injurious and environmentally friendly approach to dispersing nuisance birds.

Range: Up to 1 mile

Includes laser, safety keys, charger, & rechargeable 3 volt lithium battery

Power: 1x3 volt CR123A rechargeable lithium battery

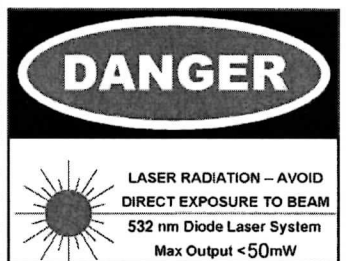

Class IIIb OEM, 200 mW

Usage: 20 sec. on, 10 sec. off

6 month warranty

Includes laser, safety keys, charger, and rechargeable 3.7 volt lithium battery

The Bird Phazer 200 is warranted to effectively repel geese and birds when used according to instructions. There is a 6 month warranty against parts and labor
