

**RodeXit's  
All-In-One general-purpose rodent proofing seal and door sweep  
a crucial cornerstone of first-class rodent exclusion**

**main benefits**

excellent rodent protection

easy and fast to install

durable

labour-saving and highly cost-effective

**for rodent proofing**

horizontally opening doors such as hinged swing doors

vertically opening doors such as garage doors

pipe holes in walls and other stationary gaps

**the stainless-steel barrier**

The rodent proofing barrier consists of 1/24 in thick stainless-steel wires.

In this picture they are shown stripped from the basic polymer.

The spacing between the wires is 0.2 in.

That is too little for a mouse to squeeze through.

## The Practical Rolls and Boxes

The All-In-One seal is sold in 36 ft rolls and 16½ ft rolls (what is required for a standard double garage door). You cut off only what you needed, so you avoid the waste that is usually connected with fitting seals that come in short standard lengths such as 4 ft. The 36 ft rolls come in very handy small boxes measuring only 3x16x16 in.

With a roll in the back of the service van a tech can fast and quickly handle most rodent proofing jobs on the spot.

## Mounting

The All-In-One seal can be installed by means of:

screws and washers

a mounting strip  
of aluminum

a mounting strip  
of matching wood

a kickplate

double-sided tape

glue

If the ground is very rough with large indentations, the indentations can be blocked by means of a brush strip mounted on top of the All-In-One seal. That will keep insects out.

When proofing pipe holes in walls you can use:

screws and washers

or glue

On [www.rodexit.com](http://www.rodexit.com) you can

mounting  
videos

## Extra Protection

A single layer is normally sufficient. A double layer can be installed if the rodent pressure is very high or if a particularly high degree of protection is required. A single layer can proof up to 1.4 in wide gaps. A double layer can proof up to 2 in wide gaps.

## Reduction of Heating and Air-conditioning Costs

A single layer on both sides of a door will improve the insulation properties significantly and thereby substantially reduce the heating and air-conditioning costs – and of course also improve the rodent protection.

Trapped air

Trapped air

Improved insulation

Saved heating and air-conditioning costs

## Easy, Fast and Labor-Saving Installation → Cost-effectiveness

The many screw hole markings and the symmetrical and foolproof design makes mounting by means of screws and washers easy and fast.

The Rodexit seal is amazing and very Cost-effective. It's so much easier.

Kyle Kilgore, Men in Black Pest Control Services

She can rodent proof a door in 2½ minutes.

How fast are you?

## The 21 Benefits

1. Great protection against pests including rats and mice.
2. More than 10 years durability under favorable circumstances.
3. Extremely easy and fast installation – a hinged swing door can be proofed in less than 2½ minutes, and a garage door can be proofed by a single person in less than 10 minutes.
4. Easy trimming with common tin snips.
5. Fool-proof symmetrical design.
6. Screw hole markings facilitate fast and perfect looking installation.
7. Installation is possible on either side of a door.
8. If an extra high degree of protection is called for, 2 layers can be installed:
9. A layer on both sides of a door significantly improves the insulation properties and substantially reduces the heating and air-conditioning costs.
10. The seal can be mounted by means of double-sided tape. That is relevant:
  - If screw holes are undesirable – e.g. if a very fine wooden door is to be proofed.
  - If the seal is to be mounted on a glass door where mounting by means of screws isn't an option.
11. The All-In-One seal can be used for rodent proofing all sorts of gaps. That saves you from ordering and storing a wide array of different proofing products.
12. The long rolls in small handy boxes are easy to store, handle, and transport.
13. With a roll of RodeXit seal in the back of the service van you can quickly and effectively handle most rodent proofing jobs on the spot.
14. Minimal trimming waste when cutting proofing strips from a roll.
15. Because the seal is symmetrical, it can be reused if the lower part has been worn or otherwise damaged. You simply dismount the seal, turn it upside-down and remount it.
16. High cost-effectiveness due to:
  - Moderate price per yard / meter.
  - Easy, fast, and labor-saving installation.
  - Long durability.
  - Minimal trimming waste.
  - Reusability.
17. Optional use of wood strips or metal strips – e.g. cheap aluminum carpet trims – as aesthetically pleasing mounting strips.
18. Usability in temperatures ranging from - 40 to + 140 Fahrenheit (- 40 to + 60 Celsius)
19. Full compatibility with kick plates and brush weather strips, that both can be used as mounting strips.
20. Easy cleaning.
21. The seal is environmentally friendly as it consists of non-toxic materials, and the seal can be recycled as steel.
